# Non-agreeing resumptive pronouns and partial Copy Deletion<sup>\*</sup> Ka-Fai Yip and Comfort Ahenkorah Yale University *kafai.yip@yale.edu; comfort.ahenkorah@yale.edu*

(This is a work in progress, comments are very much welcome!)

# 1. Introduction

- The Copy Theory of Movement
  - Movement creates *copies* rather traces (*cf.* Inclusiveness Condition)
  - Both LF and PF interfaces may choose which copy to spell-out/interpret (see, e.g. Chomsky 1993; Nunes 1995, Nunes 2004, Bošković & Nunes 2007)
  - *Partial* realizations of *both* copies (Bošković 2001, 2007, 2015; Fanselow & Ćavar. 2002; Pereltsvaig 2008, Fanselow & Féry 2013; among many others)
- Resumptive pronouns
  - Pronominal elements that appear in a position in which syntactic gaps might have occurred (McCloskey 2017)
  - Usually agree with the antecedent in *phi*-features

(1) There are guests, who, I am curious about what  $\{*it_i is/they_i are\}$  going to say.

(adapted from McCloskey 2017:1)

#### • Non-agreeing resumptive pronouns (RPs)<sup>1</sup>

- Recently attracts much interest on how it sheds light on *partial* realization of the *lower/intermediate copies* (van Urk 2018, Scott 2021, Georgi & Amaechi 2021)
- (2) { m/ gi/ yá/ ànyí/ únù/ há} ká Ézé kwè-rè nà yá
   1SG.ACC 2SG.ACC 3SG.ACC 1PL.ACC 2PL.ACC 3PL.ACC FOC Eze believe-rV in 3SG.ACC
   'Eze believes in me/you(sg)/him~her/us/you(pl)/them.' (Igbo, Georgi & Amaechi 2021:23)
- (3) Wewe ndi-ye amba-ye Hadija a-li-kutana na-we/ye
  2SG COP-1 AMBA-1 Hadija 1-PST-meet with-2SG/1
  'It's you who Hadija met with.' (Swahili, Scott 2021:823; ye = 3SG pronoun)

<sup>&</sup>lt;sup>\*</sup> This is a work in progress and earlier versions have been presented at SYNC-22 (CUNY), LSA-2022, PLC-46 (UPenn) and Yale Syntax Reading Group. For discussions and comments, we thank Bob Frank, Tommy Tsz-Ming Lee, Martin Salzmann, Milena Šereikaitė, Adrian Stegovec, Jim Wood, Raffaella Zanuttini, and the audience in the above occasions. For judgement and data, we also thank Sheila Chan and Jiahui Huang for Cantonese, and Faustina Boamah Ahenkorah for Akan. All errors remain ours.

<sup>&</sup>lt;sup>1</sup> Abbreviations: 1, 2, 3 = first, second, third person respectively; ADD = affixal additive quantifier; ALL = affixal universal quantifier; AN/IN = animate/inanimate; DET = determiner; DISP = disposal marker; CD = clausal determiner; CL = classifier; COMP = complementizer; MOD = modifier marker; NEG = negation; PERF = perfective aspect marker; PL = plural; PROG = progressive aspect marker; PST = past tense marker; REL = relative marker; SFP = sentence-final particle; SG = singular; TOP = topic marker.

- Non-agreeing RPs in two typologically unrelated languages
  - Object RPs in Cantonese (Hong Kong)
  - Subject RPs in Akan (Asante Twi)
  - □ In addition to agreeing RPs (which are allowed in other environments)

### (4) Non-agreeing resumptive pronoun in Cantonese

Nei jiu zoeng <b>di syu</b> , tai-jyun $\{\i / \text{keoi}_i / \text{keoidei}_i \}$ (object	t movement)
2SG must DISP CL.PL book read-finish 3SG 3PL	
'You must finish reading the books.'	[Cantonese]
(5) <u>Non-agreeing resumptive pronoun in Akan</u>	
<b>A-sukuu-foo</b> , <b>no</b> tumi $\{\i   \varepsilon_i   *wo_i\}$ tu ndwom (subjection)	ct movement)
PL-student-PL DET can 3SG.IN/ 3PL.AN sing song	
'The students can sing.'	[Akan]
(6) <u>Main claims</u>	
a. Both <i>non-agreeing</i> and <i>agreeing</i> RPs are attested in Cantonese and Akan	(empirical)
b. Non-agreeing RPs involve <i>movement dependencies</i> , agreeing RPs do not	(analytic)
c. <b>Copy Deletion may apply</b> <i>partially</i> to the lower copy on the <i>featural level</i> , where the residue feature is realized as non-agreeing RPs	(theoretical)

#### <u>Roadmap:</u>

\$2: Non-agreeing RPs

\$3: Movement properties

\$4: Proposal: partial Copy Deletion\$5: Concluding remarks

# 2. Non-agreeing resumptive pronouns

- 2.1. Pronoun inventories
  - Cantonese
    - *Phi*-features: person and number
      - Plural morpheme -dei
    - Third person singular: *keoi*

#### ➢ Akan Twi

- Phi-features: person, number, and animacy
- Case: nominative vs. accusative (e.g. *no* 'it/(s)he' for 3SG.AN and 3SG.IN)
- (Nominative) third person singular inanimate:  $\varepsilon$

#### (7) Pronouns in Cantonese

	SG	PL
1	ngo	ngodei
2	nei	neidei
3	keoi	keoidei

(8) <u>Nominative pronouns in Akan<sup>2</sup></u>

	SG	PL
1	me	yen
2	wo	то
3(anim.)	Э	wэ
3(inanim.)	Е	Е

<sup>&</sup>lt;sup>2</sup> While the notation in the literature often treats nominative pronouns like proclitics (e.g. 2= in Campbell 1998 or 2- in Korsah 2016), they do not necessarily cliticize onto the verb. We thus represent them without clitic notations.

[Akan]

<sup>(</sup>i) **3** <u>tumi/tae</u> **tu** ndwom 3sG.AN can often sing song 'S/he can/often sing(s).'

#### 2.2. Resumptive pronouns with featural mismatch

- Cantonese object RPs ("dummy" pronouns in Cheung 1992, Man 1998, Mai 2003)
  - Mismatch in *phi*-features with the antecedents
  - Alternates with gaps in disposal constructions
  - Only occur in *object* positions
- (9) Nei jiu  $\{ \__i / \text{keoi}_i \}$ (mismatch in number, cf. keoidei) zoeng di syu<sub>i</sub> tai-saai 2SG must read-ALL DISP CL.PL book 'You must read all the books.' [Cantonese] (10) <sup>(?)</sup>Aamingwui zoeng **ngodei geigo**<sub>*i*</sub> dou saat-saai  $\{\__i / | keoi_i \}$  gaa! (Pers & Num, cf. ngodei) Ming will DISP 1pl several ALL kill-ALL 3SG SFP

[Cantonese]

- Also found in Mandarin (more restricted) and Shanghainese (Xu 1999)<sup>3</sup>
- ➢ Akan (Asante Twi) subject RPs (Korsah 2016)<sup>4</sup>
  - Mismatch in *phi*-features with the antecedents

'(Don't go!) Ming will kill us (lit.: we several people) all!'

- Alternates with gaps<sup>5</sup>
- Only occur in *subject* positions
- (11) M-mofra no<sub>i</sub> { \_i/ ε<sub>i</sub> } tu ndwom (mismatch in <u>animacy</u> and <u>number</u>, cf. w<sub>2</sub>)
   PL-child DET 3SG.IN- sing song
   'The children sing.' [Akan]
- (12) Yεn miensa<sub>i</sub> { \_i/ ε<sub>i</sub> } tu-u ndwom (mismatch in person, cf. yεn)
  1PL three 3SG.IN sing-PST song
  'We three sang.' [Akan]
  - Only found in Asante Twi (cf. the Fante dialect of Akan, Korsah 2016)<sup>6</sup>

#### 3. Movement properties of non-agreeing resumptive pronouns

#### 3.1. Local and long-distance movement

TP-internal "local" A-movement<sup>7</sup>

<sup>6</sup> In Fante Akan, only agreeing RPs are allowed, as shown below. (ii) [**N-nvipa du pε**]<sub>i</sub> na {**wγ**<sub>i</sub>-/\***γ**<sub>i</sub>-} hvia-i

[Akan, Fante]

<sup>&</sup>lt;sup>3</sup> Non-agreeing object RPs are more restricted in Mandarin in two ways. First, the antecedents in Cantonese may be animate (=(10)) or inanimate (=(9)), while Mandarin only allows inanimate antecedents for non-agreeing RPs. Second, Cantonese non-agreeing RPs may occur in a variety of contexts (see footnote **Error! Bookmark not defined.**), whereas Mandarin non-agreeing RPs can only occur in imperatives.

<sup>&</sup>lt;sup>4</sup> See Korsah & Murphy (2019) and Hein & Georgi (2021) for object RPs. They also discuss movement properties of objects RPs, which are not entirely the same with the (non-)agreeing subject RPs to be discussed here.

<sup>&</sup>lt;sup>5</sup> Note that Korsah (2016) only discusses non-agreeing RPs in A'-dependencies, where gaps are systematically banned. As will be shown in (11)-(12) and Section 3, gaps are allowed and alternate with non-agreeing RPs in the A-dependencies.

<sup>(</sup>Korsah 2016:110)

<sup>[</sup>**N-nyipa du pɛ**]<sub>*i*</sub> na { $w_{3i-}$  / $*_{3i-}$ } hyia-i. PL-person ten only FOC 3PL- / DFLT- meet-PST 'Only ten people (as opposed to more people) met.'

<sup>&</sup>lt;sup>7</sup> In this talk, we limit ourselves to local A-movement only. cross-clausal A movement for objects (e.g. canonical long passives) is not common in Cantonese, if not unattested. Similarly, cross-clausal subject raising is also rare in Akan.

<ul> <li>Cantonese: Object movement</li> <li>From the complement of V to the edge of <i>v</i>P (<i>cf.</i> object shift, Travis 20</li> <li>Non-agreeing RPs: ✓, alternate with gaps</li> <li>Agreeing RPs: X, are banned</li> </ul>	910)

  - 'It is Ama who Kofi thought that she wants the money.' [Akan]
    - Other A-bar movements not shown here:
      - □ *Wh*-movement (only in Akan, not Cantonese)
      - Degree Topicalization/ left-dislocation (Cantonese allows both; Akan only allows agreeing RPs)
      - □ Right-dislocation (Cantonese allows both; Akan only allows agreeing RPs)

# 3.2. Movement properties of non-agreeing RPs

- Idiom preservation
  - Idiom meaning is preserved: ✓ gaps, ✓ non-agreeing RPs, ✗ agreeing RPs
  - Only literal meaning for agreeing RPs
  - Assuming idioms form a constituent (in a local domain), idiom preservation suggests that the displaced objects/subjects were part of the idioms in an early stage of derivation
     *→ movement for gaps and non-agreeing RPs*, but not agreeing RPs
- (25) **Di** seoi, nei jinggoi ceoi-maai  $\{ \__i / \text{keoi}_i / \text{keoidei}_i \}$ sin (VO idioms) CL.PL water 2SG should blow-ALSO 3PL SFP.first Literal: 'As for those (that) water, you should blow them first.' (gap, keoi, keoidei) Idiomatic: 'As for those gossips, you should finish them first.' (gap, *keoi*) [Cantonese]
- (26) Me ponko, dabiara  $\{\__i / \varepsilon_i \ / \sigma_i \}$  p $\varepsilon$  ntem (SV idioms) POSS horse daily 3SG.IN 3SG.AN want quickly Literal: 'My horse is always eager.' (gap,  $\varepsilon$ -,  $\sigma$ -) Idiomatic: 'I am always in a hurry.' (gap,  $\varepsilon$ -) [Akan]

- ➢ Island sensitivity
  - Island sensitivity: ✓ gaps, ✓ non-agreeing RPs, ✗ agreeing RPs
  - (Note: Akan gaps are independently banned in A-bar dependencies)
  - Agreeing RPs ameliorate island violations
  - Configuration: [XP<sub>i</sub> ... [island \*gap<sub>i</sub>/\*non-agreeing RP<sub>i</sub>/<sup>OK</sup>agreeing RP<sub>i</sub>] ...]
- (27) Go di [CP [Adjunct jyugwo ngodei laai-saai {\*\_i/ \*keoi/keoidei<sub>i</sub>}] (adjunct island) that CL.PL if 1PL arrest-PERF 3SG 3PL daaigaa zau wui hou hoisam] ge taamgun<sub>i</sub> everyone then will very happy MOD corrupt.official
  'Those corrupt officials<sub>i</sub> who if we arrested them<sub>i</sub> all everyone will be very happy' [Cantonese]
- (28) **M-mofra no**<sub>i</sub> [<sub>CP</sub> aa me te-e [<sub>NP</sub> n-konkonsa fa-a won ho (complex NP island) PL-child DET REL 1SG hear-PST PL-rumor take-PST 3PL.POSS body [<sub>CP</sub> sɛ {\*\_i / [\*ɛi] / wo<sub>i</sub>} fa-a pen no]]] COMP 3SG.IN /3PL.AN take-PST pen DET

'The children, who I heard a rumor about them, that they, took the pen' [Akan]

- Strong crossover effects (i.e., reconstruction for Binding C)
  - Strong crossover: moves across a c-commanding co-referential pronominal elements (i.e. the moved constituent is bound by the pronominal elements)
  - SCO effects: ✓ gaps, ✓ non-agreeing RPs, ✗ agreeing RPs
  - Agreeing RPs are inert to SCO effects
  - Configuration: [XP<sub>i</sub> ... [*pronoun*<sub>i</sub> ... [\*gap<sub>i</sub>/\*non-agreeing RP<sub>i</sub>/<sup>OK</sup>agreeing RP<sub>i</sub>]] ...]
    - Note: to avoid Binding B violation for the c-commanding pronouns (by the moved XP), all the examples below involve doubly embedded structure
      - $\rightarrow$  XP and the pronouns are not in a local domain
- (29) Go di taamgun<sub>i</sub> ne, Aaming tengman [<sub>CP</sub> keoidei<sub>i</sub> gokdak (SCO in topicalization) that CL.PL corrupt.official TOP Ming hear 3PL think [<sub>CP</sub> daaigaa dou soeng laai-saai {\*\_i/ \*keoi/keoidei<sub>i</sub>}]]
  - everyone all want arrest-ALL 3SG 3PL

'As for those corrupt officials<sub>i</sub>, Ming heard that they<sub>i</sub> think that everyone wants to arrest them<sub>i</sub> all.'[C]

- (30) **Politicians ben**<sub>i</sub> na Ama te-e [ $_{CP}$  sɛ  $w \sigma_i$  dwene (SCO in *wh*-movement) Politicians which FOC Ama hear-PST COMP 3PL think [ $_{CP}$  sɛ {\*\_i/\*ɛ / woi} bɛ di nkonim]] COMP 3SG.IN/ 3PL.AN will eat victory 'Which politicians<sub>i</sub> did Ama hear that they<sub>i</sub> think that they<sub>i</sub> will win?' [Akan]
- Weak crossover effects
  - Weak crossover: moves across a non-c-commanding co-referential pronominal elements

• WCO effects: ✓ gaps, ✓ non-agreeing RPs, ✗ agreeing RPs

- Agreeing RPs lack WCO effects •
- Configuration: [XP<sub>i</sub>... [... pronoun<sub>i</sub>...] ... \*gap<sub>i</sub>/\*non-agreeing RP<sub>i</sub>/<sup>OK</sup>agreeing RP<sub>i</sub>...]
- sailou<sub>i</sub> ne, Aaming gokdak [<sub>CP</sub> [*keoidei*<sub>i</sub> aamaa] (WCO in topicalization) (31) **Go** di that CL.PL child TOP Ming think 3PL.POSS mum jinggoi gaauhou  $\{ *_i / *keoi_i / keoidei_i \} ]$ should teach.well 3SG 3PL 'As for those kids<sub>i</sub>, Ming thinks that their<sub>i</sub> mum should teach them<sub>i</sub> to behave well.' [Cantonese]
- (32) Asukuufoo ben<sub>i</sub> (WCO in *wh*-mvt.) na Ama te-e [CP SE][*won*<sup>*i*</sup> tikya] dwene Student.PL which FOC Ama hear-PST COMP POSS teacher think  $\begin{bmatrix} CP & SE & {*_i / *E_i} \end{bmatrix}$ / wɔ<sub>i</sub>} be di nkonim]] 3SG.IN/ 3PL.AN will eat victory COMP

'Which students<sub>i</sub> did Ama hear that their<sub>i</sub> teacher thinks that they<sub>i</sub> will win?' [Akan]

- 3.3. Interim summary
  - Gaps and non-agreeing RPs are allowed in local A-movement, but not agreeing RPs
    - i.e. gaps and non-agreeing RPs may associate with the antecedents *locally* 
      - $\rightarrow$  no Binding B violation  $\rightarrow$  non-agreeing RPs do not pattern with referential pronouns
  - In Akan, gaps are not available in A'-movement

### (33) Distribution by movement types

		Gap		Non-agreeing RPs	Agreeing RPs
		Cantonese	Akan	(keoi and $\varepsilon$ -)	
Local A-mvt.		YES	YES	YES	NO
A-bar mvt.	monoclausal	YES	NO	YES	YES
	long-distance	YES	NO	YES	YES

Gaps and non-agreeing RPs show movement properties, but not agreeing RPs

### (34) Movement properties

ino toment properties	Gap		Non-agreeing RPs	Agreeing RPs
	Cantonese	Akan	(keoi and $\varepsilon$ -)	
Idiom preservation	YES	YES	YES	NO
Island sensitivity	YES	_	YES	NO
Strong crossover effects	YES	—	YES	NO
Weak crossover effects	YES		YES	NO

# 4. Proposal: partial Copy Deletion

# 4.1. Theoretical background

- Copy Theory of Movement (Chomsky 1995, Nunes 1995, Nunes 2004, Bošković & Nunes 2007)
  - Movement creates copies
    - □ XP ... <XP>
  - Copy Deletion applies to the lower copy in typical cases, deleting all the features
- Distributed Morphology (Halle & Marantz 1993 et seq.)
  - Functional elements only have SynSem features in syntax (i.e. no phonological content)
  - Get phonological content through Vocabulary Insertion *post-syntactically* (i.e. in the PF)
  - Recap: pronouns in Cantonese and Akan

(35) Pronouns in Cantonese		(36) <u>Nominative</u>	(36) <u>Nominative pronouns in Akar</u>					
		SG	PL		SG	PL		
	1	ngo	ngodei	1	те	уєп		
	2	nei	neidei	2	wo	то		
	3	keoi	keoidei	3(anim.)	Э	wэ		
				3(inanim.	3	ε		

• Featural compositions of the pronouns

 $\hfill\square$  The most unmarked (default) pronouns: 3SG *keoi* and 3SG.IN  $\ensuremath{arepsilon}$ 

(37) Vocabulary Items of Cantonese pronouns			(38)	) <u>Vocabulary Items of A</u>	tems of Akan pronouns		
[D, +author]	$\leftrightarrow$	ngo		[D, +animate, +pl]	$\leftrightarrow$	wэ	
[D, +addressee]	$\leftrightarrow$	nei		[D, +author, +pl]	$\leftrightarrow$	yen	
[D, +pl]	$\leftrightarrow$	dei		[D, +addressee, +pl]	$\leftrightarrow$	то	
[D]	$\leftrightarrow$	keoi		[D, +animate]	$\leftrightarrow$	Э	
				[D, +author]	$\leftrightarrow$	те	
				[D, +addressee]	$\leftrightarrow$	wo	
				[D]	$\leftrightarrow$	ε	

# 4.2. Non-agreeing RPs as a result of partial Copy Deletion

# ➢ Key components:

•	• Copy Deletion may apply <i>partially</i> , deleting all the features on the lower copy <i>except the label</i>							
		If the lower copy is a DP, delete everything except the label [D]						
		Cf. various proposals of distributed/scattered deletion (e.g. left branch extraction, as in						
		Bošković 2001, 2015; Fanselow & Ćava 2002; and predicate fronting, as in Bentzen 2008,						
		Larson 2020, van Urk 2021)						

- The remaining [D] realizes as a default pronoun in the PF by Vocabulary Insertion
  - $\square \quad [D] \leftrightarrow default \ pronoun$

• We will discuss the potential motivation for partial CD in concluding remarks

(39) Partial and Full Copy Deletion							
Syntax: $\alpha_{[\underline{D}],[\varphi],} \dots \beta_{[\underline{D}],[\varphi],}$ ; where $(\alpha, \beta)$ is a chain created by movement							
CD: (i) <i>Full</i> $\alpha_{\underline{[D]}, [\varphi], \dots} \dots \beta_{\underline{[D]}, [\varphi], \dots} \rightarrow \text{surface string} = \alpha$							
(ii) <i>Partial</i> $\alpha_{[\underline{D}],[\varphi],\dots} \dots \beta_{[\underline{D}],[\varphi],\dots} \rightarrow \text{surface string} = \alpha \dots e$	xponent of D (=default pronoun)						
> Implementation

# 4.3. The role of [D] in A-movement and why it's special

> [D] plays a crucial role in A-movement in both languages

- No *phi*-inflection on verbs in Cantonese and Akan
  - D [D] is subject to Agree for movement, not *phi*-features

- Object movement in Cantonese (see more in Appendix)
  - □ Restriction on the *interpretation*: indefinite reading is not available
     → Li (1998): indefinite NPs in Chinese lacks a D head (i.e. \*[Num [Cl [N]]])
  - □ Restriction on the *internal structure*: **bare nouns** are banned (i.e. \*[<sub>NP</sub> N])
  - Consistent with the cross-linguistic facts that vP-internal object movement/ object shift is sensitive to definiteness, e.g. Yiddish, Icelandic, among may others (Travis 2010, Diesing 1992, 1997, Collins & Thráinsson 1996, Svenonius 2000)

#### The presence of a (covert) D-head licenses object movement in Cantonese

#### (44) Definite objects and quantifiers

a. Nei	heo	i zoen	g { <b>Aam</b>	ing/	go h	oksaa	ng <sub>def</sub> / n	ni	go	hoksaang}	daawan	keoi	laa
28G	go	DISP	Ming	g	CL S	tudent	t t	his	CL	student	stun	3SG	SFP
'You	1 go k	knock {N	Ming/ tł	ne stu	ident	/ this s	tudent	} do	wn				
b. Nei	heo	i zoeng	[mui	jat	bun	syu]	tai-saa	ai	kea	Dİ			
2sg	go	DISP	every	one	CL	book	read-a	all	350	j			
'You	ı go r	ead eve	ry book	.,									

(45) Indefinite objects, bare nouns, epistemic indefinites

\*Nei heoi zoeng { hoksaang/ saam go hoksaang/ mzi bingo } daawan keoi laa 2SG go DISP student three CL student MZI who stun 3SG SFP Int.: 'You go knock {students/ three students /some unknown person} down. '

- Subject movement in Akan
  - □ A determiner/nominalizer is obligatory for non-DPs to be subjects<sup>8</sup>
  - Clausal determiner *no* (same form with the nominal determiner)

# (46) CP subjects with the clausal determiner

[[<sub>CP</sub> Sε o tumi tu ndwom]\*(no)] ε yε adi pa COMP 3SG.AN can sing song CD 3SG.IN be thing good 'That s/he can sing is good.'

- □ With conjoined CPs, *no* seems to be optional
- However, a topic reading is obligatory when *no* is *absent*, whereas a non-topic subject reading can be obtained with *no*
  - $\rightarrow$  *no* is still needed for subjecthood
- Potential role of [D] in licensing subject movement

<sup>&</sup>lt;sup>8</sup> For nominalizers, see the adjective phrase below:

<sup>(</sup>i) \*( $\mathfrak{s}$ )-kese no  $\epsilon$  tu ndwom

NMZL-big DET 3SG.IN sing song 'The big person sings'

(47) Conjoined CPs

- [[<sub>CP</sub> Sε o tumi tu ndwom] ne [<sub>CP</sub> sε o tumi nanti ko parki no so]] (no), COMP 3SG.AN can sing song and COMP 3SG.AN can walk go park DET LOC CD
  - ε yε adi pa

3SG.IN be thing good

With *no*: 'That s/he can sing and that s/he can go to the park are good.'

Without *no*: 'As for the facts that s/he can sing and s/he can go to the park, they are good.'

- Speculation: [D] survives since it is *the feature that Probe searches for* (but not *phi*-features)
  - If [D] enters into Agree relation with some A-Probe (that triggers subject/object movement), ...
    - □ The [D] feature is checked on the higher copy, but not on the lower copy
    - □ [**D:+**] … [**D:**\_]: distinct features?

> Prediction: A-bar movement with non-agreeing RPs require a prerequisite A-movement

• Seems to receives some support from Cantonese: the bare noun restriction holds

(48) <u>Bare noun contrastive topics</u>

- a. Siuseot ne, Aaming jinggoi tai \_ , maanwaa zau m-hou laa novel TOP Ming should read comics then not-good SFP 'As for novels, Ming should read (them); but not comics.'
- b. \*Siuseot ne, Aaming jinggoi tai-zo **keoi** , maanwaa zau m-hou laa novel TOP Ming should read-PERF 3SG comics then not-good SFP

# (49) A-bar movement follows A-movement

 $\begin{bmatrix} \text{TopicP} < \mathbf{Obj} >_{i} \dots \begin{bmatrix} v_{P} < \mathbf{Obj} >_{i} \begin{bmatrix} v_{P} \ V < \mathbf{Obj} >_{i} = \mathbf{keoi} \end{bmatrix} \end{bmatrix}$ (intermediate copy not pronounced)

# 4.4. Agreeing RPs as base-generated pronouns

- Another type of resumption: Agreeing RPs
  - We suggest that they are **base-generated pronouns**
  - When they occur, the antecedents are also base-generated at the surface position
  - Anaphoric relation between the agreeing RPs and the antecedents
- (50) Agreeing RPs as base-generated pronouns

Syntax:	$[antecedent_{\underline{[D]},[\phi]} \dots [ \dots \underline{[D]}, [\phi] \dots ]$	]	(base-generation)
PF:	[antecedent <sub>[D],[\varnotheta]</sub> [ agreeing RPs ]	]	(Vocabulary Insertion)

- Deriving the properties of agreeing RPs
  - Featural matching

 $\geq$ 

- □ Born with *phi*-features which are not subject to Copy Deletion
- Featural matching is a general requirement by pronominal dependencies, which holds crosssententially:

(51) <b>Di</b>	hoksaang <sub>i</sub>	mei dou.	M-dang	{keoidei <sub>i</sub> /	* <b>keoi</b> <sub>i</sub> }	laa.	
CL.PL	student	NEG arrive	NEG-wait	3pl	3sg	SFP.	
'The	students <sub>i</sub> hav	ven't arrived ye	et. (I) won't	wait for the	em <sub>i</sub> .'		[Cantonese]
(52) Me	hu-u n	- <b>kwaala no</b> i ε	nora.	Na $\mathbf{w}\mathbf{a}_i$	di ag	goro.	
1SG	see-PST PI	L-child DET y	esterday	pst 3pl	eat ga	ame	
ʻI sav	v the childrer	n yesterday. The	ey, were play	ying.'			[Akan]

#### Lack of movement properties •

The surface position of the antecedents results from base-generation, but not movement from the (agreeing-)RP position

# Banned in local A-movement: Binding B violation

The agreeing RPs are bound by the antecedent in their binding domain 

(53) *[ <sub>TP</sub> Nei	jiu [ <sub>vP</sub>	zoeng	di	syu <sub>i</sub>	tai-jyun	$[_{\rm VP} t_V$	keoidei,	]]]	(=(14), Binding domain: TP)
2SG	must	DISP	CL.PL	book	read-finish	ı	3pl		
Int.:'Yo	u must fi	nish rea	ding th	ne bool	ks.'				[Cantonese]
(54) *[ <sub>TP</sub> A-s	ukuu-fo	i no a	enora	[ <sub>vP</sub> <b>v</b>	v <b>ə</b> i tu-u	<b>i</b> 1	ndwom]]		(=(16), Binding domain: TP)
PL-S	student-P	l det y	vesterd	ay 3	BPL.AN sing	g-PST s	song		
Int.:'The	students	sang ye	esterda	y.'					[Akan]

□ In A'-dependencies, the antecedents are outside the binding domain TP (i.e. Spec,CP) and are able to bind the pronouns without violating Binding B (cf. Bošković 2016: the phasal edge belongs to the higher binding domain)

(55) [ <sub>TopicP/CP</sub>	Aaming_jne $[_{TP}$ ngogokdak $[_{\nu P}$ *(keoi_j)houzangkeoizigei_j]]MingTOP1SGthink3SGvery hate3SG.REFL	
'As for I	Ming <sub>j</sub> , I think (he <sub>j</sub> ) hațes himself <sub>j</sub> .'	[Cantonese]
(56) [ <sub>FocP/CP</sub>	John <sub>j</sub> (ankasa <sub>j</sub> ) na $\left( [_{TP} (*ankasa_j) [_{\nu P} \varepsilon tu - u ndwom no ]] \right)$	
	John REFL FOC' REFL 3SG.in sing-PST song DET	
'It is Joh	hn <sub>j</sub> himself <sub>j</sub> who sang the song.'	[Akan]

It is John<sub>j</sub> himself<sub>j</sub> who sang the song.

 $\rightarrow$  Highest subject restrictions do not apply

 $\rightarrow$  agreeing RPs are allowed in mono-clasual A'-dependencies

#### Lack of movement properties •

- The surface position of the antecedents results from base-generation, but not movement from the (agreeing-)RP position
- Predictions in ATB-movement<sup>9</sup>  $\triangleright$ 
  - ATB-movement: both dependencies must be the same (i.e. movement)

<sup>&</sup>lt;sup>9</sup> We thank Martin Salzmann for drawing our attention to ATB-movement. Note that the patterns here are different from Zurich German, where gaps and base-generated resumptives can be "mixed" in ATB-movement (Salzmann 2012).

(57) Non-agreeing RPs are predicted to alternate with gaps (in both word orders) a. Antecedent ... [ ... non-agreeing ...] & [ ... \_gap ...] b. Antecedent ... [ ... non-agreeing ...] & [ ... non-agreeing ...] With agreeing RPs: Mixed base-generation and movement dependencies fail to license ATB-mvt (58) Agreeing RPs are predicted to contrast with both gaps and non-agreeing RPs (in both word orders) a. \*Antecedent ... # 5. Concluding remarks

- Two types of resumption
  - The dual nature of resumptive pronouns and cross-linguistic variations (Rouveret 2011)
    - □ Some behave like **traces**, e.g. Vata (Koopman 1983)
    - □ Some behave like **pronouns**, e.g. Irish (McCloskey 1990)
    - □ Some in-between, e.g. Swedish (Engdahl 1985)
  - *Both* types are attested in Cantonese and Akan
    - Manifested as different morphological forms
    - Cf. two types of RPs in Igbo (Georgi & Amaechi 2021) & Swahili (Scott 2021)
    - Cf. Strong-weak distinction in Welsh (Tallermam 1983) and Hausa (Tuller 1986)

#### (61) Two types of resumption in Cantonese and Akan

	Generation	Features	Relation with the antecedent
Non-agreeing RPs	Partial Copy Deletion	[D]	Movement dependency
Agreeing RPs	Base-generation	[D] + [phi]	Pronominal dependency

- Partial Copy Deletion
  - The growing literature of varieties of CD, among which CD may be:
    - distributed/scattered (Bošković 2001, 2015; Fanselow & Ćavar. 2002; Pereltsvaig 2008, Fanselow & Féry 2013; among many others);
    - □ suspended (e.g. Trinh 2009, Lee 2021); and
    - substituted (Mendes & Ranero 2021)
  - Distributed/scattered deletion is essentially partial CD on both higher and lower copies
  - Non-agreeing RPs as partial CD on the lower copy
- Restricting partial CD: Potential role of the [D] feature in A-movement
- Remaining issues and further steps
  - The (non-)alternation of non-agreeing RPs and gaps
    - Akan: gaps are systematically banned in A-bar movement
    - Cantonese: gaps are degraded in if the antecedent is "too far away"

Analysis: they undergo *the same object movement*, with differences in *whether verb moves* 

(65) Pre-verbal objects (e.g. zoeng-disposal constructions)

$$[_{vP} zoeng Obj_i [_{VP} V < Obj >_i = keoi]]]$$
(Object movement)

(66) Post-verbal objects

 $[V \dots [_{\nu P} Obj_i [_{VP} <V> <Obj>_i=keoi]]]$ (Object movement + Verb movement)

- Arguments: similar restrictions with regard to: (i) Objects; (ii) Argument structure; (iii) Aspect
- (67) <u>Similarities between zoeng-disposal constructions and post-verbal object cases</u>

Restrictions	Zoeng	Post-verbal object cases		
Objects	Definite/ quantifier	Definite/ quantifier		
Argument structure	Transitive	Transitive		
Aspect	Telic	Telic		

#### > **Objects**: sensitive to the interpretation and the internal structure

- ✓ Definite objects, quantifier phrases
- X Indefinite objects, bare nouns, epistemic indefinites *m-zi-wh* 'not-know wh' (Lee 2021)
- An object CL-N, ambiguous between a definite and an indefinite reading (Cheng & Sybesma 1999), is disambiguated as definite

# (68) Definite objects

a. Post-verbal O Nei heoi daawan {Aaming/ go hoksaangdef/ ni go hoksaang} keoi laa Ming CL student this CL student 2SG go stun 3SG SFP 'You go knock {Ming/ the student/ this student} down.' b. Pre-verbal O with zoeng Nei heoi zoeng {Aaming/ go hoksaang<sub>def</sub>/ ni go hoksaang} daawan keoi CL student this CL student 2SG go DISP Ming stun 3SG

'You go knock {Ming/ the student/ this student} down.'

laa

SFP

(69) <u>Quantifer phrases</u> a. <i>Post-verbal O</i> Nei heoi tai-saai [ <b>mui jat bun syu</b> ] <b>keoi</b> 2SG go read-all every one CL book 3SG 'You go read every book.'
b. <i>Pre-verbal O with</i> zoeng Nei heoi zoeng [ <b>mui jat bun syu</b> ] tai-saai <b>keoi</b> 2SG go DISP every one CL book read-all 3SG 'You go read every book.'
<ul> <li>(70) Indefinite objects, bare nouns, epistemic indefinites <ul> <li>a. Post-verbal O</li> <li>*Nei heoi daawan {hoksaang/ saam go hoksaang/ mzi bingo } keoi laa</li> <li>2SG go stun student three CL student MZI who 3SG SFP</li> <li>Int.: 'You go knock {students/ three students / some unknown person} down.'</li> <li>b. <ul> <li>2SG go DISP student three CL student MZI who stun 3SG SFP Int.: 'You go knock {students/ three students /some unknown person} down.'</li> <li>&gt; Argument structure: Verbs must be able to take an object</li> <li>✓ Transitive verbs (e.g. dawaa 'stun' above); and "transitive" uses of unergative verbs</li> </ul>
(71) Unergative verba. ??Paau-zokeoi!b. *Nei dou siu-maaikeoi!run-PERF3SG2SG DOU laugh-ADD3SGInt: 'Run!'Int: 'you laugh (just like the others)!'
<ul> <li>(72) <u>Transitive use of unergative verb</u></li> <li>a. <b>Paau-maai</b> {go maalaaicung/ ni loeng bou} keoi! (post-verbal O)</li> <li>run-ADD CL marathon this two step 3SG</li> <li>'Go finish the marathon/ these two steps!'</li> </ul>
<ul> <li>b. Zoeng {go maalaaicung/ ni loeng bou} paau-maai keoi! (pre-verbal O with zoeng)</li> <li>DISP CL marathon this two step run-ADD 3SG</li> <li>'Go finish the marathon/ these two steps!'</li> </ul>
• X Unaccusative verbs
<ul> <li>(73) <u>Unaccusative verb</u></li> <li>a. *Aaming lai-zo keoi</li> <li>b. *Sei-zo Aaming keoi</li> <li>Ming come-PERF 3SG die-PERF Ming 3SG</li> <li>Int.: 'Ming should come'. Int.: 'Ming should go die.'</li> </ul>

- Solution Aspect: The event must be telic, i.e. bounded (Man 1998)
  - • Perfective/ resultative verbs (VR)
  - X Imperfective/ bare verbs

#### (74) Telic events (e.g. VR-compound, "Achievement")

- a. **Silaan** ni bun syu **keoi**! rip.off this CL book 3SG 'Rip this book off!'
- b. Zoeng [ni bun syu] silaan keoi! DISP this CL book rip.off 3SG 'Rip this book off!'
- (75) Atelic events (e.g. bare verb, "Activity")
  - a. Tai ni bun syu (\*keoi)! read this CL book 3SG Int.: 'Read this book!'
  - b. \*Zoeng [ni bun syu] tai (keoi) ! DISP this CL book read 3SG Int.: 'Read this book!'

#### ➤ A note on non-asserted contexts:

- Man (1998): *keoi* as a marker for non-asserted bounded clauses<sup>10</sup>
- While aspectual boundedness (=telicity) is strictly required, *non-assertedness* does not seem so.

(post-verbal O)

(post-verbal O)

(pre-verbal O with zoeng)

(pre-verbal O with zoeng)

• A preference instead of a restriction

(76) Aafai tai-zo bun syu (\*keoi,) (Man 1998:54) CL book  $\overline{3SG}$ Fai read-PERF 'A-fai has read that book.' (77) Houcoi keoi bong ngo gaaudim-saai di jei keoi, zaa! fortunately 3SG help 1SG settle-ALL CL.PL thing 3SG SFP 'Fortunately, he helped me to settle all those things! (Otherwise, I'd be in a mess.)'

• *Cf.* Mandarin: highly preferred in imperatives and degraded in other contexts (Kiki Liu p.c.)

<sup>&</sup>lt;sup>10</sup> Man (1998) original generalization is that "the minimal clause containing *keoi* cannot be asserted". Strictly speaking, the generalization is true for **Error! Reference source not found.** if a "minimal clause" does not contain any SFPs and adverbials.
